

## STRINGS

### Single quoted strings

```
groovy> package com.app
groovy> class GroovyStringExample1 {
groovy> static void main(args)
groovy> {
groovy>     String s1 = 'Javatpoint'
groovy>     println s1
groovy>     println 'This is tutorial on Groovy at ' + s1
groovy> }
groovy> }
```

Javatpoint  
This is tutorial on Groovy at Javatpoint

### Double quoted strings:

```
groovy> package com.app
groovy> class GroovyStringExample2 {
groovy> static void main(args)
groovy> {
groovy>     String s1 = "Javatpoint"
groovy>     println s1
groovy>     println "This is tutorial on Groovy at " + s1
groovy> }
groovy> }
```

Javatpoint  
This is tutorial on Groovy at Javatpoint

```

groovy> package com.app
groovy> class GroovyStringExample3 {
groovy> static void main(args)
groovy> {
groovy>     String s1 = "Javatpoint"
groovy>     println "This is tutorial on Groovy at ${s1} "
groovy>     println "This is tutorial on Groovy at $s1 "
groovy> }
groovy> }

```

This is tutorial on Groovy at Javatpoint  
This is tutorial on Groovy at Javatpoint

### Triple quoted strings:

```

groovy> package com.app
groovy> class GroovyStringExample4 {
groovy> static void main(args)
groovy> {
groovy>     String s1 = '''This is groovy tutorial and we are learning string'''
groovy>     println s1
groovy> }
groovy> }

```

This is groovy tutorial and we are learning string

```

groovy> package com.app
groovy> class GroovyStringExample5 {
groovy> static void main(args)
groovy> {
groovy> String s1 = '''This is line 1
groovy> This is line 2
groovy> This is line 3
groovy> This is line 4
groovy> This is line 5'''
groovy> println s1
groovy> }}

```

This is line 1  
This is line 2  
This is line 3  
This is line 4  
This is line 5

```
groovy> package com.app
groovy> class GroovyStringExample6 {
groovy> static void main(args)
groovy> {
groovy>     String s1 = ""This is groovy tutorial and we are learning string""
groovy>     println s1
groovy> }
groovy> }
```

This is groovy tutorial and we are learning string

```
groovy> package com.app
groovy> class GroovyStringExample7 {
groovy> static void main(args)
groovy> {
groovy> String s1 = ""This is line 1
groovy> This is line 2
groovy> This is line 3
groovy> This is line 4
groovy> This is line 5""
groovy>     println s1
groovy> }
groovy> }
```

This is line 1  
This is line 2  
This is line 3  
This is line 4  
This is line 5

```
groovy> package com.app
groovy> class GroovyStringExample8 {
groovy> static void main(args)
groovy> {
groovy> String s1 = ""This is line 1
groovy> This is line 2
groovy> This is line 3
groovy> This is line 4
groovy> This is line 5""
groovy> println ""Hello $s1""
groovy> println ""Hey $s1""
groovy> }
groovy> }
```

```
Hello This is line 1
This is line 2
This is line 3
This is line 4
This is line 5
Hey This is line 1
This is line 2
This is line 3
This is line 4
This is line 5
```

```
groovy> package com.app
groovy> class GroovyStringExample9 {
groovy> static void main(args)
groovy> {
groovy> String s1 = /This is groovy tutorial and we are learning string/
groovy> println s1
groovy> }
groovy> }
```

```
This is groovy tutorial and we are learning string
```

this is groovy tutorial and we are learning groovy

```
groovy> package com.app
groovy> class GroovyStringExample11 {
groovy> static void main(args)
groovy> {
groovy> String s1 = /This is line 1
groovy> This is line 2
groovy> This is line 3
groovy> This is line 4
groovy> This is line 5/
groovy>         println s1
groovy> }}
```

```
This is line 1
This is line 2
This is line 3
This is line 4
This is line 5
```

```

groovy> package com.app
groovy> class GroovyStringExample1 {
groovy> static void main(args)
groovy> {
groovy> String s1 = /This is line 1
groovy> This is line 2
groovy> This is line 3
groovy> This is line 4
groovy> This is line 5/
groovy> println ""Hello ${s1}""
groovy> println ""Hey $s1""
groovy> }}

```

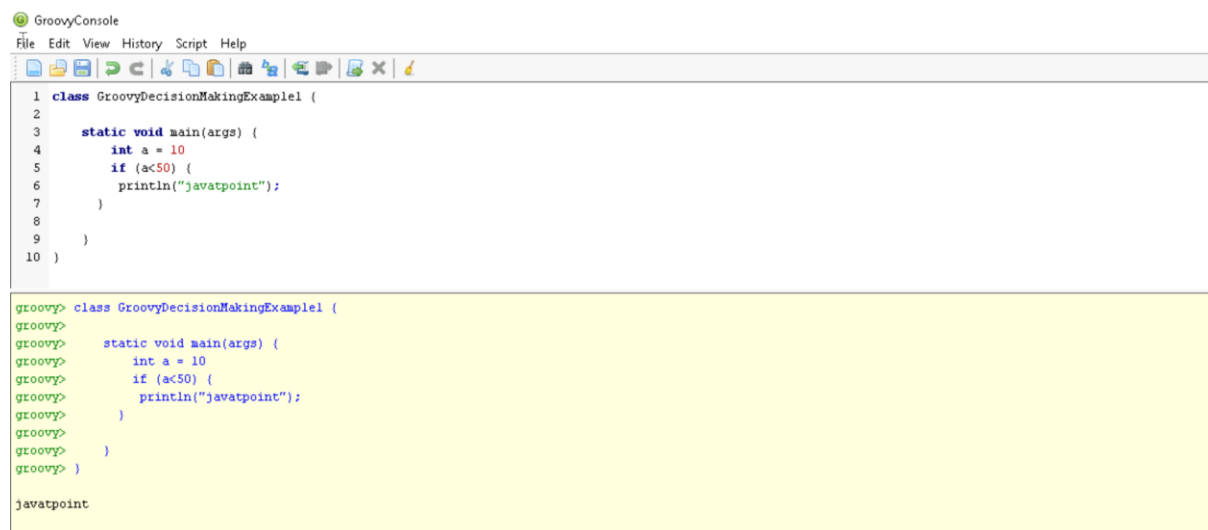

```

Hello This is line 1
This is line 2
This is line 3
This is line 4
This is line 5
Hey This is line 1
This is line 2
This is line 3
This is line 4
This is line 5

```

## DECISION MAKING:

### 1. IF Statement:

The screenshot shows the GroovyConsole interface. The top part displays the source code for a class named `GroovyDecisionMakingExample1`. The code defines a `main` method that initializes a variable `a` to 10 and uses an `if` statement to check if `a` is less than 50. If the condition is true, it prints "javatpoint". The bottom part of the console shows the output of the code execution, which is "javatpoint".

```

1 class GroovyDecisionMakingExample1 {
2
3     static void main(args) {
4         int a = 10
5         if (a<50) {
6             println("javatpoint");
7         }
8     }
9 }
10

```

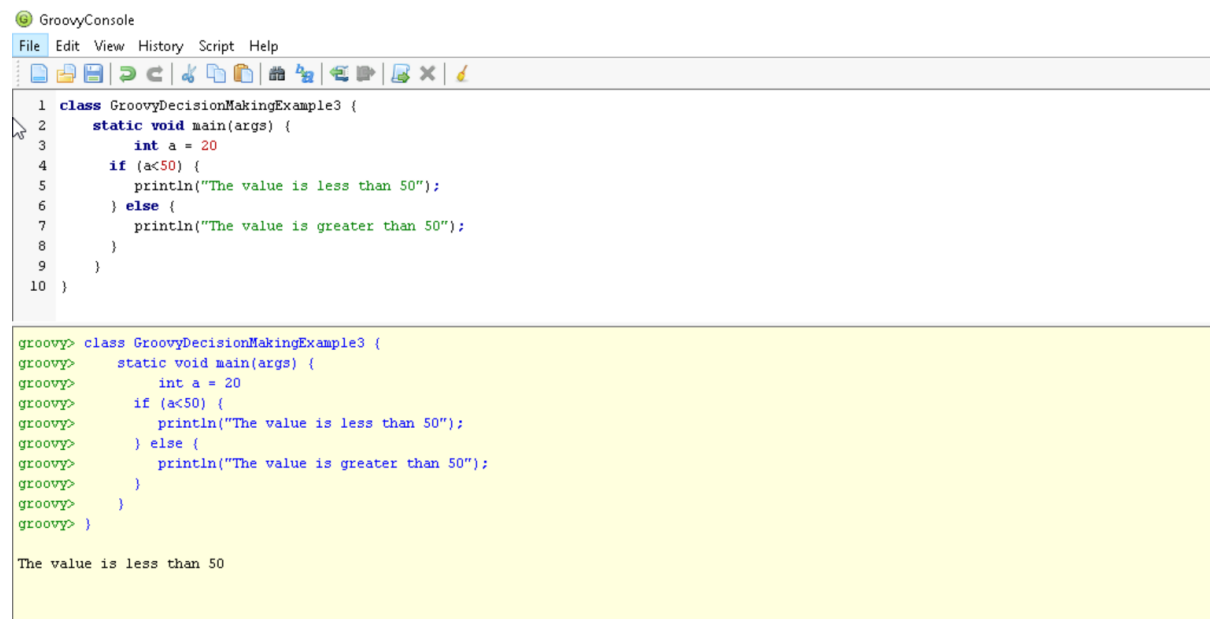

```

groovy> class GroovyDecisionMakingExample1 {
groovy> static void main(args) {
groovy>     int a = 10
groovy>     if (a<50) {
groovy>         println("javatpoint");
groovy>     }
groovy> }
groovy> }

```

javatpoint

## 2. IF- ELSE:

The screenshot shows the GroovyConsole application. The top toolbar includes icons for File, Edit, View, History, Script, and Help. The main text area contains the following Groovy code:

```
1 class GroovyDecisionMakingExample3 {
2     static void main(args) {
3         int a = 20
4         if (a<50) {
5             println("The value is less than 50");
6         } else {
7             println("The value is greater than 50");
8         }
9     }
10 }
```

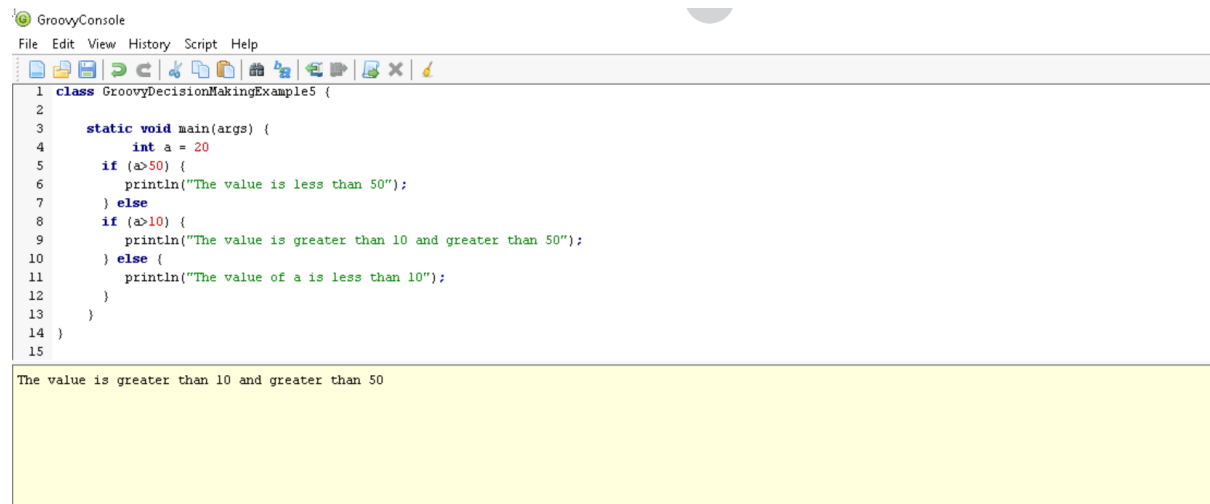

Below the code editor, the console output is displayed on a yellow background:

```
groovy> class GroovyDecisionMakingExample3 {
groovy>     static void main(args) {
groovy>         int a = 20
groovy>         if (a<50) {
groovy>             println("The value is less than 50");
groovy>         } else {
groovy>             println("The value is greater than 50");
groovy>         }
groovy>     }
groovy> }
```

The output of the program is:

```
The value is less than 50
```

## 3.NESTED – IF:

The screenshot shows the GroovyConsole application. The top toolbar includes icons for File, Edit, View, History, Script, and Help. The main text area contains the following Groovy code:

```
1 class GroovyDecisionMakingExample5 {
2
3     static void main(args) {
4         int a = 20
5         if (a>50) {
6             println("The value is less than 50");
7         } else
8         if (a>10) {
9             println("The value is greater than 10 and greater than 50");
10        } else {
11            println("The value of a is less than 10");
12        }
13    }
14 }
15
```

Below the code editor, the console output is displayed on a yellow background:

```
The value is greater than 10 and greater than 50
```

## 4. SWITCH STATEMENTS:

```
GroovyConsole
File Edit View History Script Help

1 class GroovyDecisionMakingExample6 {
2     static void main(args) {
3         int a = 4
4         switch(a) {
5             case 1:
6                 println("Monday");
7                 break;
8             case 2:
9                 println("Tuesday");
10                break;
11             case 3:
12                 println("Wednesday");
13                 break;
14             case 4:
15                 println("Thursday");
16                 break;
17             case 5:
18                 println("Friday");
19                 break;
20             case 6:
21                 println("Saturday");
22                 break;
23             default:
24                 println("Sunday");
25                 break;
26         }
27     }
28 }
```

## WEB SCRAPING USING GROOVY with Jsoup:

```
GroovyConsole
File Edit View History Script Help

1 @Grab(group='org.jsoup', module='jsoup', version='1.15.3')
2 import org.jsoup.Jsoup
3
4 def topic = "AWS" // Change to any topic
5 def url = "https://en.wikipedia.org/wiki/${topic}"
6 def doc = Jsoup.connect(url)
7     .userAgent("Mozilla/5.0 (Windows NT 10.0; Win64; x64) AppleWebKit/537.36 (KHTML, like Gecko) Chrome/119.0.0.0 Safari/537.36")
8     .get()
9
10 def summary = doc.select("p")
11     .find { it.text().trim() }
12     ?.text() ?: "No content found."
13
14 println "Wikipedia Summary of ${topic.replace('_', ' ')}:\n${summary}"
15
```

Wikipedia Summary of AWS:

Amazon Web Services, Inc. (AWS) is a subsidiary of Amazon that provides on-demand cloud computing platforms and APIs to individuals, companies, and governments, on a metered, pay-as-you-go basis. Clients will often use this in combination with autoscaling (a process that allows a client to use more computing in times of high application usage, and then scale down to reduce costs when there is less traffic). These cloud computing web services provide various services related to networking, compute, storage, middleware, IoT and other processing capacity, as well as software tools via AWS server farms. This frees clients from managing, scaling, and patching hardware and operating systems. One of the foundational services is Amazon Elastic Compute Cloud (EC2), which allows users to have at their disposal a virtual cluster of computers, with extremely high availability, which can be interacted with over the internet via REST APIs, a CLI or the AWS console. AWS's virtual computers emulate most of the attributes of a real computer, including hardware central processing units (CPUs) and graphics processing units (GPUs) for processing; local/RAM memory; hard-disk (HDD)/SSD storage; a choice of operating systems; networking; and pre-loaded application software such as web servers, databases, and customer relationship management (CRM).

## GROOVY LOG FILE ANALYSER:

```
GroovyConsole
File Edit View History Script Help

1 import java.nio.file.*
2
3 def logFilePath = "C:/Users/Administrator/Documents/demologfile.txt"
4 def logFile = new File(logFilePath)
5 if (!logFile.exists()) {
6     println "Error: Log file not found at $logFilePath"
7     return
8 }
9 def logData = [:].withDefault { 0 }
10
11 logFile.eachLine { line ->
12     def matcher = line =~ /\d{4}-\d{2}-\d{2} \d{2}:\d{2}:\d{2}\s+(INFO|WARNING|ERROR)\s+(.+)/
13     if (matcher.find()) {
14         def timestamp = matcher[0][1]
15         def statusCode = matcher[0][2]
16         def message = matcher[0][3]
17         logData[statusCode]++ // Count occurrences
18         println "[${timestamp}] Status: ${statusCode} - ${message}"
19     }
20 }
21 println "\nLog Analysis Summary:"
22 if (logData.isEmpty()) {
23     println "No matching log entries found."
24 } else {
25     logData.each { key, value -> println "$key : $value occurrences" }
26 }
27
```
